

2017 Veterinary Technician Continuing Education Conference

Masterclasses

- Anti-Convulsants: What Drugs to Use and Why – *While we have fewer drugs available for intravenous use in seizure control, many drugs when given intravenously can have a much more profound effect than when given by mouth. This class will discuss the various IV drugs we use in the hospital setting for seizure control, as well as some other drugs we use for maintenance control.*
- Practical Application of Anesthesia Monitoring Equipment – *This lab is designed to demonstrate how to utilize patient monitoring equipment during anesthesia.*
- What Would You Do?: Integrative Medicine Case Review – *This masterclass will cover treatment of commonly seen orthopedic and neurologic rehabilitation cases. This will be a very interactive masterclass with photos and videos of cases paired with discussion. The techniques may be beneficial in your practice. All questions and ideas are invited and encouraged!*
- Triage Essentials: Accurately and Efficiently Assessing the Emergent Patient – *Imagine being trapped in a busy ER, seven patients walk through the door at the same time, what do you do? Who is treated first? Please join me in an interactive case study to see who can survive the perils of the veterinary ER.*
- Find Your Calling: Veterinary Technician Specialties – *A comprehensive presentation about all of the specialties available for technicians.*
- Exotic Companion Animal Emergency and Triage: The Critical First Few Minutes to Hours – *This course will cover topics of initial triaging and hands-on nursing care of the critical avian, reptilian, and exotic companion mammal patients. Technicians will be exposed to multiple hands-on techniques for common exotic companion animal emergencies.*
